COMP2300 - Peer Reviews

Week 6 and Week 7 | Keshav Singhal and Hiranya Makkar

These reviews use the PRISM structure: Positive contributions, Recommendations, Impact and Summary. They combine meeting evidence with the reviewer's observations about individual development.

Keshav Singhal : Week 6

Project: COMP2300 - Software Design and Development

Review period: Week 1

Reviewer: Arnav Mishra

P : Positive contributions

Keshav contributed by preparing an initial literature review draft and identifying potential opportunities for an India-focused carbon-footprint tool. His discussion of gaps in existing solutions, particularly around local lifestyles and intercity mobility, helped the team explore how the project could offer a more specific contribution.

R : Recommendations

Keshav could strengthen his contribution by carrying out more detailed research and ensuring that claims are supported by reliable academic sources. The presentation of his work could also be improved through more consistent and professional formatting, making the document easier to read and evaluate. More generally, communicating the reasoning behind research choices clearly would help the team review and build on his work.

I : Impact

The initial research provided a useful starting point for the group's discussion of the problem space. Improving the depth of the evidence and the presentation of findings would make that research more effective as a foundation for subsequent design decisions.

S : Summary

Keshav made a useful initial contribution through his literature review and identification of potential research gaps. The main areas for development were research depth, professional document formatting and clear communication of his reasoning.

Keshav Singhal - Week 7

Project: COMP2300 - Software Design and Development

Review period: Week 2

Reviewer: Arnav Mishra

P : Positive contributions

Keshav demonstrated improvement in his communication style and contributed actively to completing Deliverable 1. He refined the Job to Be Done statement, developed the forces shaping the job, worked on the epics and MoSCoW prioritisation, and documented key design tensions. He also contributed to transcript coding and theme development, as recorded in the Week 2 meeting minutes.

R : Recommendations

Although his communication improved, Keshav should continue developing the depth of his research and maintain consistent, professional formatting across his contributions. As the project moves into design and implementation, he should also ensure that assumptions behind the prototype's emission calculations are clearly labelled and supported by appropriate sources wherever possible.

I : Impact

His improved communication made it easier for the team to discuss and refine his work. His contributions to the JTBD, epics and prioritisation also helped translate the group's research into a more structured set of requirements.

S : Summary

Keshav showed positive development between Weeks 1 and 2, particularly in communication and his contribution to the final D1 package. Continued attention to research depth, evidence quality and presentation will help him make his work more effective in the next phase.

Hiranya Makkar - Week 6

Project: COMP2300 - Software Design and Development

Review period: Week 1

Reviewer: Arnav Mishra

P : Positive contributions

Hiranya contributed to the group's early discussion of the project direction, particularly by identifying the potential for lifestyle segmentation and exploring whether lightweight machine-learning approaches, such as K-Means, could be useful. Hiranya also participated in discussions about the limitations of existing carbon-footprint tools and the responsible use of generative AI within the project.

R : Recommendations

A key area for improvement was becoming more involved in group coordination and communicating ideas more openly. Taking a more proactive role in discussions, sharing progress regularly and helping coordinate next steps would make collaboration smoother and ensure that ideas were considered early rather than later in the process.

I : Impact

Hiranya's technical ideas offered useful possibilities for the project. Greater involvement in coordination and more consistent communication would help the team evaluate these ideas together and connect them more effectively to the research findings.

S : Summary

Hiranya brought useful technical perspectives to the initial discussions. The main development area for Week 1 was to become more actively involved in coordination, share ideas more openly and communicate progress more consistently.

Hiranya Makkar _ Week 7

Project: COMP2300 _ Software Design and Development

Review period: Week 2

Reviewer: Arnav Mishra

P : Positive contributions

Hiranya showed positive progress in Week 2 by being more present in group discussions, coordinating more actively and opening up more when communicating with the team. Hiranya contributed to coding transcripts CF5–CF7, developing personas P3 and P4, and checking the scenario-to-epic traceability table against the latest scenarios. Hiranya also helped organise shared documentation and identify version mismatches before they became larger issues.

R : Recommendations

Hiranya should continue building on this improvement by maintaining regular communication and taking initiative in coordinating tasks as the project moves into D2. Sharing ideas early, raising uncertainties and helping the group agree on next steps will be particularly valuable as the team begins design work and technical setup.

I : Impact

The increased involvement and coordination helped improve the team's collaboration and the consistency of the D1 documents. Hiranya's work on personas and traceability also strengthened the link between interview evidence, user scenarios and prioritised requirements.

S : Summary

Hiranya made noticeable progress from Week 1 to Week 2 in participation, coordination and openness with the team. Continuing this momentum while contributing to design decisions and shared project planning will help sustain effective teamwork in the coming weeks.
