COMP2300: Minutes of Meeting

University of Southampton

Module: COMP2300, University of Southampton
Meeting title: Literature review alignment, project scope and technological affordances
Date: 15/10/2026
Time: 12:00 pm – 1:00 pm
Venue / Platform: Group Study Room / Whiteboard Session
Chair: Arnav
Minutes taken by: Keshav

Attendees

- Arnav – Team member
- Hiranya – Team member
- Keshav – Team member

Apologies

- None

Agenda

- Literature review and pre-meeting draft evaluation
- Project scope and market saturation discussion
- Technological affordances and implementation strategy

Progress Since Last Meeting

Task / Deliverable	Owner	Status	Notes
Pre-meeting literature review draft	Keshav	Drafted (premeeting)	Reviewed and evaluated by the group at this meeting

Discussion and Decisions

1. Literature review and pre-meeting draft evaluation

Discussion: Keshav presented a pre-drafted literature review focusing on localising carbon footprint tracking for urban Indian lifestyles, targeting emission drivers such as hyper-local quick-commerce, high-dairy diets, and Tier-2 to Tier-1 intercity mobility. Arnav evaluated the draft against the four foundational research papers and the 2024 Springer Nature review he had previously suggested to the team, and noted that his suggested macro-accounting literature aligns with and validates the “Quick-Commerce and Dairy Gap” identified in the draft. Hiranya analysed the draft's section on “Lifestyle Segmentation and Advanced Analytics”, in particular the gap around real-time segmentation, and proposed addressing this by embedding lightweight machine learning (such as K-Means clustering) directly into a personal Java application.

Decision: Agreed that combining the macro-accounting literature with the localised draft approach validates the QuickCommerce and Dairy Gap as a genuine area to pursue. Hiranya's lightweight machine learning proposal was noted as an idea to investigate further rather than adopted outright. **Owner:** Keshav (draft), Hiranya (segmentation proposal)

2. Project scope and market saturation

Discussion: Arnav and Hiranya raised concerns about market saturation, noting that numerous apps, websites, trackers and calculators already cover generic sustainability tracking, which leaves limited scope for genuine research gaps in a generalised tool. Keshav responded using insights from the pre-drafted report to argue for a highly specific, domain- and cause-specific project, highlighting the “Tier-2 Intercity Mobility Gap” (for example, commuting between

Dehradun and tech hubs like Gurugram or New Delhi via diesel sleeper buses versus electrified rail) to show that generic calculators fail to evaluate regional logistics.

Decision: Arnav and Hiranya agreed to set aside their market saturation concerns and adopt the draft's strategy of addressing specific HCI opportunities: nudging users toward lower-emission shared transit and reducing dietary UI friction. Reached by consensus. **Owner:** Whole team

3. Technological affordances and implementation strategy

Discussion: Keshav shared practical implementation ideas drawn from IIT Delhi's existing work on Green Development and a recent IIT Delhi hackathon on Sustainable Software Development, and opened a discussion on the technological affordances needed to build the proposed localised tracker. All three members discussed their individual comfort with specific skills and technologies. Arnav and Hiranya led the definition of the initial scope and boundaries for the use of Generative AI, agreeing the team should use it responsibly to assist with complex tasks such as reducing UI friction for dietary tracking, rather than relying on it for foundational coding.

Decision: Agreed on an initial GenAI usage boundary: AI assists with specific, well-scoped tasks (e.g. UI friction reduction) and is not relied on for foundational coding. Individual comfort levels with tools and technologies noted for future task allocation.

Owner: Arnav and Hiranya (GenAI scope), Keshav (technical exploration)

Risks and Blockers

- Market saturation among existing generic carbon calculators – mitigated by pivoting to a domain-specific focus on quick-commerce, dairy and Tier-2 intercity mobility gaps (Owner: whole team)

Action Items

#	Action	Owner	Due date	Status
1	Expand the literature review around the macroaccounting, quick-commerce and dairy gap findings	Keshav/Arnav	20/10/2026	Open
2	Investigate feasibility of lightweight ML (e.g. KMeans clustering) for lifestyle segmentation within the Java application	Hiranya	20/10/2026	Open
3	Draft the team's GenAI usage scope statement (for genai.txt)	Arnav / Hiranya	20/10/2026	Open

Any Other Business

- None

Next Meeting

Date: 22/10/2026

Time: 16:00 to 17:00

Venue / Platform: Pocket Park

Circulated on: 16/10/2026

Approved at: Week 7 meeting (22/10/2026)
